Dear Mr. / Mrs.,

I feel great happiness in recommending **George Popescu** to you.

First of all I must state that I have known **George** since his high-school period when interacting with the best mathematicians at the **national phase of our Mathematics Olympiad**. He then solved many problems by showing us new ways of computing and judgment. He has won our appreciation since his first participation in **2001**.

As being his **coordinator teacher** for two of his published papers at the **Politehnica University of Bucharest Students' Communication Session** I could see **George's** development year after another. In **2005** he has won the **1st prize** on the University with his paper on "**Binary codification of images**" and one year after the **special prize** with "**Binary codification of forms**". I was very happy to remark that our conversation have been put on paper and his ideas showed us new directions of research.

His presentation skills are very good and combined with his analytic ones lead him to such success. I must add that **George** is one of the best students I have been working with in the recent years.

Thanks & regards,

Radu Nicolae Gologan
Senior Research Scientist - Institute of Mathematics “Simion Stoilow” of the
Romanian Academy and Professor Dr. University Politehnica of Bucharest
